Diesel Treatment

Ref. 1152 * 6x500ml * 3266720011529

USE

BARDAHL Diesel Treatment, designed for motorists concerned about the proper maintenance of their vehicle, are preventive products which can be used throughout the life of the engine, and which allow excellent running-in. They are recommended to avoid loss of nervousness and power due to clogging and engine wear (petrol or diesel). Compatible with all types of petrol or diesel engines (injection, carburetion, high pressure, turbo, LPG), catalytic converters and particle filters. Recommended by leading manufacturers.

PROPERTIES

Thanks to its properties, BARDAHL Diesel Treatment provides the following functions: Lubricates the upper part of the cylinders and segmentation and partially compensates for the disappearance of lead in petrol and sulfur in diesel.

- Prevents damage to valves and seats.
- Eliminates knocking and self-ignition.
- Improves flexibility, recovery and acceleration.
- Removes water from fuel.
- Anti-freeze in winter, the diesel treatment lowers the filterability limit temperature (TLF) by 7°C (IFP test no. 74709), lowers the cloud point (NF-T60105) and the pour point.
- Improves cold starts.
- Reduces fuel consumption (up to 5%). Protect and keep the fuel system clean (carburetion or injection). Reduce exhaust fumes.
- Reduces the noise of cold diesel engines.

INSTRUCTIONS FOR USE

Press bottle until desired quantity in the graduated dosage upper part of the bottle.

Pour contents into fuel tank and drive.

Compatible with any type of petrol engine.

Could alter the functioning of the catalytic converter if used too often.
