Injector cleaner

Ref. 1198B

12x500ml

USE

To be used with no need for dismantling. Compatible with old and new petrol engines, including high pressure systems.

Miscible in all types of petrol fuels, except E85 fuels.

PHYSICAL & CHEMICAL PROPERTIES

Physical state	Liquid
Color	Yellow
Odour	Solvent
Flash point	13°C
Relative density	0,795 – 0,805

PROPERTIES

BARDAHL high pressure Petrol Injector Cleaner is a synthetic, non-corrosive product. It is effective for the different components of the injection system and has 6 functions:

- Cleans and protects the injection system (injectors, valves, pumps, combustion chamber,...) and eliminates carbon and other deposits, gum, varnish,...
- Increases the octane rate and therefore improves performance and power.
- Prevents seizing of the injectors and pump by eliminating the condensation water contained in the fuel.
- Limits fuel overconsumption thanks to its anti-friction properties.
- Reduces engine noise and wear thanks to its lubricating properties.
- Reduces exhaust smoke and helps meet the requirements of the technical inspection.

INSTRUCTIONS FOR USE

Pour the contents of the bottle into fuel tank. One can treats a maximum of 60L. However, for a better efficiency, we advise to pour product into 20L of petrol fuel only, drive until full consumption (for a quick result, drive at high RPM in the low gears) and then re-tank.

Each 5,000 km and before the anti-pollution test of the technical inspection.
